

Spreader Conveyor

Kleenline offers conveyors to spread out or converge product.
Spreader – moves tightly placed product apart to provide space between product for expansion or visual recognition.

For production of discrete rows individual lanes of conveyor belt can start together and spread apart to deliver the desired product spacing.

For random product or a fine tuned adjustment individual urethane strand belts can be utilized to customize product distribution and spacing.

Contact us to deliver the right solution for your spreading application

Other Aligning Methods Available

Laner / Switch – takes product from single file orientation and distributes it to multiple lane choices as demands dictate.

Smart belt – servo controlled conveyors to alter spacing between product front to back.

Aligning device – straightens out or readjusts product alignment
